

JS

JavaScript is the programming language of the web! It is used to give your websites behavior.

Useful tutorials [here](#).

```
<!DOCTYPE html>
<html>
<body>

<h2>JavaScript HTML Events</h2>
<h2 onclick="changeText(this)">Click on this text!</h2>

<script>
function changeText(id) {
  id.innerHTML = "0oops!";
}
</script>

</body>
</html>
```

[JavaScript Tutorial \(w3schools.com\)](#)

Javascript-its the part that allows users to interact with the webpage(beyond clicking a link that goes to another page)

JavaScript Jigsaw

20:00

Find your playing card. Bring your computers. Then, take turns.

1. **Name the behavior seen in your table's web page.**
2. **Demonstrate how to implement a SIMPLE version of this behavior using JavaScript.**

Don't forget to take notes if you're not presenting!

Id then class

Window.onload function

Two div classes
Style circle container position in middle
Gray border
Slide out circle
Transform label goes with circle

List of all bands
Interval of 50
Cycles through list of bands
